5058i / 6058i / 7058i

Manage even the most complex tasks like a pro.

Office systems in the mid-range segment not only have to offer brilliant quality, but also professional paper management as well. That is why we developed the 5058i, 6058i and 7058i A3 b/w multifunctional systems which, in addition to output speeds of 50, 60 or 70 A4 pages/minute in b/w, also provide additional finishing components for your output management. With the optional Z-fold or inserter unit, you gain new opportunities for minimising manual tasks and professionalising your results. Not to mention the impressively intuitive operation on the tiltable 10.1-inch (25.6cm) colour touch display and outstanding environmental compatibility.

What you can expect:

Timesaving: Capture individual documents, receipts or sales slips for travel expenses and report them quickly and easily with the integrated MultiCrop receipt scanning function. In just one step, it can digitally cut, straighten, and scan up to 16 receipts simultaneously and then store them separately as a file. A great relief, especially for small-format and non-standardised originals! For professional high-speed digitalisation, we recommend our Dual Scanner with ultrasonic sensors*, which can process up to 274 image pages per minute (300 dpi). The scanning unit not only detects and stops the scanning process when multiple originals are fed in, but also protects them at the same time thanks to its innovative staple detection.

Multi-layered: The systems not only process a wide range of paper weights (52-300 g/m^2) and formats (A6R-SRA3), but also offer extensive finishing options. The Job Separator provides a better overview thanks to the internal offset output*, where print jobs or other outputs are sorted to either offset to the left or right, making for easy removal. Various finishers with a stapling function* are available for professional paper management creating less manual work, and in combination with the brochure and/or Z-fold module, your business letters can be folded to fit the length envelope.

Climate-friendly: The climate concept is at the forefront of the multifunctional systems, with energy efficiencies and emissions optimised beyond current environmental requirements for the three systems. Functions such as EcoPrint, duplex printing and the automatic skipping of blank pages also further promotes this way of thinking, as resources such as paper, toner and time are saved in everyday workflows.

Play it safe: A standard feature of the system is that it can overwrite and delete print, scan, and copy data multiple times, as well as current encryption protocols such as TLS 1.3 allowing for secure data transmission on the Internet. The USB card readers* provide additional security by automatically verifying your identity on the multifunctional system using a contactless card or transponder.
